

Pressure and posture preferences provided by Porter

The Boston Porter is the latest addition to Repose's healthcare seating range, featuring new wing handles for ease of portering when the chair is occupied and the backrest is reclined, as well as a new double comfort lateral back cushion for luxurious support and comfort.

With a choice of either an electric or manual model, the chair comes with standard features that include Tilt in Space, independent backrest recline and leg elevation, along with height and angle adjustable footplate aimed at maximising postural management.

The company says the chair is ideally suited to being part of a client's 24-hour pressure care management programme and additionally, a range of interchangeable pressure management back and seat cushion options ensure correct comfort and posture choices can be made.

SPRINGING INTO PRESSURE CARE ACTION

With prevention of pressure ulcers becoming increasingly critical and the care industry recognising that prevention is more cost effective than cure, the Airospring range represents a breakthrough in pressure care, according to Polymorit.

The company says multiple layers of patented XD spacer fabric inside the Pressure Relief Optimised (PRO) cushions creates performance superior to both specialist memory foam and pressure relieving gel.

The Airospring PRO cushions comply with BS6807 Crib 5 regulations, incorporating a Fire Resistant internal layer to make them suitable for use in care establishments.

100 percent washable, including the core, the cushions' light weight also make them easier to handle.
