

# Nevada

Rocking recliner

The gentle rocking motion of the Nevada chair gives the user the soothing and calming feeling that no other standard hospital chair can offer. The Nevada was designed following feedback from maternity wards and users requiring the need of the calming effect of the rocking motion, which offers the user the ability to recline should they so wish to elevate their legs and recline the back for comfort, allowing the chair to lock into position either by choosing the manual or electric version.

**Fabric in image:** Manila Ore outside panels
